

Product Evangelist

Fintech / Open Banking / Confidential Computing

About YAXI

YAXI brings together Open Banking and Confidential Computing technology. Its bank access technology runs on secured hardware and provides confidential, supervised bank account access for information processing and payment initiation to market participants and their customers without any regulatory hurdles.

Job Description

As an Open Banking Evangelist, you'll showcase the power of our fintech product by creating demo projects in various programming languages and use cases. You'll write blog posts, tutorials, and case studies to highlight our platform's capabilities and share your technical insights. Working closely with the product and tech teams, you'll help shape the conversation around Open Banking and engage our community—all within a small, agile team.

Setup

We work dynamically in a fully remote setup out of Munich and Nuremberg. In Nuremberg, you could get a seat in our shared office space at ZOLLHOF, next to one of the founders, and of course face-to-face meetings are also possible in Munich.

About You

You're a programming polyglot, comfortable working with multiple languages to craft polished, impressive use cases. You embrace AI coding tools (e.g., Claude Code) to enhance your development process and deliver high-quality results. You're skilled at communicating your research and findings, whether through blog posts, LinkedIn, or technical media. You're outgoing and enjoy connecting with others in the tech community.

Perks

Benefits include the flexibility to work fully remote, 30 days of paid vacation, a Deutschlandticket, and the opportunity to make a direct impact within a small, dynamic team.
